Whether you implement the fully interactive patient entertainment and education system (with the clinical system interface) or begin with the interactive entertainment system and add additional features later, LodgeNetRX is customized for the functionality you select. System capabilities can be limited to certain wards, rooms or floors of the healthcare facility.

Based upon the facility's preferences, the LodgeNetRX system can include information channels, interactive services, caregiver features, payment options, entertainment services, HSIA, patient education and integrated healthcare services. Patients can place their meal orders through the system, request linens and pillows, enjoy recently released Hollywood movies, play video games and even e-mail friends, family and colleagues with LodgeNetRX's high-speed Internet capability. If there is a need to change the channel lineups, the LodgeNetRX system can broadcast a new firmware version or channel lineup from LodgeNetRX's central server location to all patient rooms without ever entering the patient rooms.

Patients and their visitors can stay informed with the use of the Healthcare Information Channel, while multilingual system capabilities maximize the number of patients who can potentially understand and use your LodgeNetRX system.
