

On Demand Patient Education

The LodgeNetRX™ Interactive Patient Television System improves the patient experience while offering numerous benefits to hospitals and care facilities. We have established relationships with health related educational content providers like Patient EDU, wired.MD™, and Milner-Fenwick. We can even encode your existing educational content to cache for on demand playback through the interactive TV network.

IMPROVE THE PATIENT EXPERIENCE THROUGH EDUCATION

Quality Education Videos – On Demand

LodgeNetRX can deliver patient education content on demand, for total flexibility in presenting patients with prescribed health education with minimal effort from your busy nursing staff. The system's technology can customize a delivery method that supports your workflow and meets your specific objectives. Content can be prescribed for specific patients and custom presentations are available for patients with similar diagnoses. LodgeNetRX supports multiple viewing sessions and can reduce the need for nurse involvement in the training process. The centrally-stored digital video library provides easy on demand access for the staff, the patient and the patient's family members, to improve the education process for everyone – no more cumbersome VCR carts or video storage libraries!

Patient Activity and Comprehension Tracking

The On Demand Patient Education feature can automatically document viewing and comprehension to support the increasingly stringent requirements of the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) and other regulatory agencies. It delivers real-time notices and on demand reports that can be viewed, sorted and printed by patient, unit, category or video – offloading labor intensive tracking and reporting functions from your busy nursing staff even as it keeps them up-to-date on patients' completion and comprehension.

On Demand Patient Education

Ease Of Use

LodgeNetRX includes easy-to-use TV menus and has media playback controls similar to a standard DVD player, such as play, pause, stop, skip forward and back, etc. The system allows viewers to stop viewing then resume later with their videos bookmarked where they left off – ideal for the healthcare environment where patients are frequently interrupted.

Patient Education Library

LodgeNet Healthcare has relationships with a variety of health-related education content providers such as Patient EDU, wired.MD™ and Milner-Fenwick. These relationships bring you an extensive aggregation of already encoded videos to easily customize a solution that is right for your healthcare facility. Your education video selections are centrally stored on your LodgeNetRX digital content server. General Education Videos – On Demand provides easy on demand access for your staff, patients and patient visitors to improve the education process for everyone.

Continued Patient Education

Continued patient education is also available for when patients go home. LodgeNetRX provides hospitals and care facilities with the option of allowing patients to access educational content through a Web portal for at-home patient education or a DVD can be made from LodgeNetRX Interactive Patient Television System materials for patients to take home upon hospital discharge.

The following service is provided through LodgeNet Healthcare's relationship with Patient EDU:

My Education (Using Patient EDU)

The My Education service includes integrated content and features from Patient EDU, which enables a doctor or nurse to prescribe a set of videos for a patient to watch as part of his/her education program. These videos may also include questions the patient must answer to confirm understanding. All information is reported back to your clinical systems so you can track each patient's educational progress.
