Meeting Room Solutions

Satisfying your clients is all about the details –

especially when broadband services are part of the package.

LodgeNet's Meeting Room Solutions reflect nearly a decade of experience
in planning, designing, installing and managing
connectivity solutions for hoteliers and their guests.

We help you take care of the technology –

so your clients can focus on what they're really there to do.

PRE-EVENT SERVICES

Our experienced Meeting Room Solutions professionals will work with your meeting groups to address their network requirements before the event. This includes solution design and consultation, attending pre-conference meetings, and working directly with your group's coordinator and/or technical staff.

BROADBAND SOLUTIONS

We understand that each group has unique requirements for its event. We have worked extensively with a broad range of hotels to develop broadband solutions that meet virtually any set of network requirements.

CUSTOM NETWORK SOLUTIONS

If your clients require a higher level of network configuration, we have the answer. Our technical specialists can work directly with conference groups to engineer solutions for events with more complex networking needs such as VPN connectivity, IP addressing, bandwidth monitoring, firewalls, nonbroadcasting SSIDs, custom network security and more.

SOLUTION OPTIONS

Single Speaker / Registration Point*

- Ideal for groups requiring a single Internet connection for a registration desk or individual presenter.

Dual Speaker / Registration Point*

- The perfect solution for groups requiring two Internet connection points at a registration desk. This solution can also be implemented as two workstations in the back of the event room, or as two connections for speaker presentations.

Web Café*

- Exclusively designed so attendees can easily access their e-mail in the meeting room or during conference breaks in the pre-function area. The Café can also be used for meeting planner offices.
- Pricing is based on the total number of connections required.

WebMeeting*

- Intended for Web-based training sessions or groups requiring a separate secure network for their conference event via custom private network configuration.
- Includes pre-event consultation, live on-site support, remote network monitoring, custom SSID and StaySecure encrypted wireless security.

Video & WebStreaming

- Designed for groups hosting an Internet based video broadcast.
- Includes dedicated bandwidth and a static public IP address.

Dedicated Bandwidth

- Designed for groups requiring a guaranteed minimum amount of bandwidth to support their usage demands.
- Primarily a wired solution, but wireless can be provided if the group is utilizing the entire meeting space.

* Wired and wireless solutions are available.

Meeting Room Solutions

NETWORK MONITORING

Broadband network performance can make or break a conference event.

With remote network monitoring by our Network Operations Center (NOC) – and on-site technical support during the event – your client’s conference will have the support it mandates.

Our NOC-Alert service provides “live”, port-level network monitoring to protect the integrity of the broadband connection from start to finish.

SUPPORT SOLUTIONS

From pre-conference setup and testing through on-site support, last-minute requests and remote network remediation, our team of experienced technicians will be there to help you at every step – before, during and after the event.

For more information, contact a LodgeNet Meeting Room Solutions specialist today
at conferenceservices@lodgenet.com.

We look forward to helping make your next conference a success.
