Improve Network Performance

LodgeNet Broadband Aggregation Solutions

LET'S FACE IT... slow network performance is a drag. But adding T1 lines to boost bandwidth can be expensive.

What if you could add lower-cost connections in your hotel – combine the bandwidth of all those connections into one “superpipe” – and deliver that improved performance seamlessly to your users? **How cool would that be?**

With a Broadband Aggregation Solution from LodgeNet, you can.

It collects the bandwidth from diverse connections – T1, cable or DSL – combines it – and re-distributes it intelligently across users. If you only have a T1 now, this solution allows you to increase your bandwidth by adding lower-cost connections instead of expensive T1 lines.

RESULT?

Better network performance for your guests, convention clients, and staff. Scalable to what you have now – and what you add in the future. And all at a price that will make your bottom line sing.

More bandwidth; less cost. **NEAT, HUH?**
